[chouhandev.me](https://chouhandev.me) | [GitHub](https://github.com/dev7nsh) | [LinkedIn](https://www.linkedin.com/in/dev7nsh)

## SUMMARY

Final-year BCA student and self-taught DevOps / full-stack engineer with freelance experience delivering blockchain node infrastructure, full-stack web development, and DevOps for a live production client. Built DevOpsBY, an independent DevOps consulting platform. Comfortable across the MERN/Next.js stack and Linux-based infrastructure. Seeking an entry-level DevOps or full-stack engineering role to bring this hands-on, project-driven experience into a team.

## TECHNICAL SKILLS

- **Cloud & DevOps:** Docker, Kubernetes, CI/CD (GitHub Actions, Jenkins, ArgoCD), Terraform, NGINX, Prometheus/Grafana, Azure
- **Development:** MERN Stack (MongoDB, Express, React, Node.js), Next.js, JavaScript
- **Other:** Linux, Git/GitHub, Blockchain & Web3 fundamentals

## EXPERIENCE

### Freelance DevOps & Blockchain Engineer — DevOpsBY — Client Engagement

2024 – Present

Remote

- Designed and deployed blockchain validator node architecture for a DevOpsBY client's live blockchain-ecosystem platform.
- Built and maintained full-stack web features (Node.js/React) for the client's platform, including its public roadmap page.
- Owned end-to-end DevOps — Kubernetes, CI/CD pipelines, and monitoring — to keep the client's production infrastructure stable.
- Migrated video delivery to Cloudflare Stream to resolve a Supabase cached-egress cost overage.

### Bug Bounty Researcher — NEAR Foundation

Apr 2021 – Jul 2021

Remote / Switzerland

- Identified and reported a critical smart contract vulnerability to NEAR's security team, preventing potential crypto fund losses.
- Gained hands-on exposure to blockchain protocols and decentralized architecture through bug bounty research.

## PROJECTS

### DevOpsBY — devopsby.me

Apr 2024 – Present

- Independently built and launched a DevOps consulting platform offering Kubernetes, CI/CD automation, and cloud infrastructure services for startups and Web3 projects, used to source freelance client work.

### Deepfake Detection Platform — Team Lead of 5 developers

Live demo: [developby.me](https://developby.me)

- Led a team of 5 developers to build an AI-based deepfake detection tool combining PyTorch and the MERN stack.
- Integrated PyTorch models to analyze facial and audio inconsistencies, improving detection accuracy by 7% and reducing false positives.
- Automated the deployment lifecycle with Docker and ArgoCD-managed Kubernetes, increasing deployment efficiency by 60% and achieving 98% uptime.

### Full-Stack Chat App Deployment — Personal Project

Nov 2025 – Oct 2025

- Deployed a three-tier MERN application on Kubernetes; containerized services and resolved networking and image issues.
- Achieved 98.9% uptime through pod orchestration and health checks.

### FitHit — AI Nutrition Tracking PWA — fithit.app

- Built an AI-powered nutrition tracking Progressive Web App using Next.js, React 19, and Gemini Vision AI, with Supabase as the backend and Vercel for deployment.

## CERTIFICATIONS

- Introduction to DevOps — IBM

## EDUCATION

### Bachelor of Computer Application (BCA) — Poddar International College, Jaipur

2023 – 2026

- Top 5% rank in class
- Represented college in multiple hackathons
